TIMES' MEDICO

☆ TM's Q bank ☆

2ND EDITION

As per CBME curriculum

- **Subject: Anatomy**
- **Including AETCom**
- **Revised edition**

-------- By: Shiva Rayakanti & Nithin koushik

Note:

》》 5 star indicates most repeated question in university exams

》》 3 star indicates less commonly repeated question.

》》 1 star indicate important questions having a scope to be asked.

》》 Topics with no stars are minor topics, you should read total questions.

》》 From recent years they are asking SAQs for LAQ with case study, so you need to focus on every question as it is 100M paper they can ask you from any corner.

》》 We have included mostly all important questions from minor topics also so please take this xerox and keep it with you.

TIMES' MEDICO

Previous reviews :

Sir I am so grateful
For your PDFs and your precious guidance during exams , i passed my 1st year with distinction with 675 marks . . . thank you so much sir
I am really grateful for your support . . I entirely followed ur telegram channel sir
Thank you so much sir💜💜💜

Hello sir. . one-month preparation with the pdf provided by timesmedico. . . . made us pass in 1 class thankuh so much sir for the guidance and it helped us a lot

Good afternoon sir
Thank you so much. . . . . .
You all helped us a lot . . . . .
U made us grow from zero to the stage where we passed our exams. . . . . with good marks
You really gave a great support and provided us with best question banks and everything. . . . even when u are busy with your own works. . . .
We are really very thankful to you sir . . . .

Thank you sir. I found your channel last month and prepared all the important questions, relly helpful. Got 662, I didn't do too well in mcqs but in theory I'm happy with my marks

UPPER LIMB

LAQ:

- *****Brachial plexus** a) Roots b) trunks c) divisions d) cords e) branches f)Applied.
- *****Mammary gland** a) extent and situation b) Deep relations c) structure of breast d) Lymphatic drainage e) Vascular supply f) Development of breast g) (Applied aspects)
- *****Median nerve**-formation, course, innervations and clinical anatomy
- *****Radial nerve**- formation, course, innervations and branches, clinical anatomy
- *****Ulnar nerve**- formation, course and branches along with Applied aspects.
- *****Shoulder Joint** a) type and articular surfaces b) ligaments c) Relations d) blood supply and nerve supply e) movements f) Clinical anatomy
- ***Axillary artery**, its relations and branches and add a note on Axillary anastomosis.
- *****Mention the arterial pulses which can be felt in the upper extremity .Mention the origin, course, relations and the branches of the radial artery.

SAQ:

- ***Musculocutaneous nerve
- *****Axillary Nerve
- ***Rotator cuff
- *****Elbow Joint
- ***Axillary lymph nodes
- *****Muscle-biceps, *deltoid, coracobrachialis, supinator, triceps, brachioradialis, pronator teres
  A]origin B]insertion C]Nerve supply & action D]Applied aspects
- ***Flexor Retinaculum
- *****Anastomosis around elbow joint
- *scapular anastomosis
- *****Lumbricals
- *****Spaces of hand
  A]pulp spaces (whitlow)
  B]thenar and hypothenar spaces

C]Forearm space of parona

- *****Supination and pronation
- ***Proximal and distal radioulnar joint
- *****Clavipectoral fascia
- ***Intermuscular spaces & contents passing through it
- *****1st carpometacarpal joint (thumb)
- *****Cubital fossa
- ***Brachial artery and its applied aspects
- *Palmar aponeurosis
- *****Anatomical snuff box
- *****Carpal tunnel syndrome
- ***Median cubital vein, cephalic vein and basilic vein
- ***Superficial and Deep palmar arches
- *Triangle of auscultation
- *****Scaphoid fracture
- ***Peculiarities of clavicle
- *****Attachments related to coracoid process
- *****Winging of scapula (serratus anterior)
- *****Nerves related to humerus
- ***Anatomical basis of claw hand
- *Write about ulnar artery

LOWER LIMB

LAQ:

- *****Sciatic nerve**- common peroneal nerve and posterior tibial nerve
- *****Venous drainage of Lower limb** a) long saphenous vein b) short saphenous vein c) perforating veins d) Applied.
- *****Arches of foot** a) Formation structure b) factors responsible for maintenance of arches c) and applied.
- *****Popliteal fossa and*popliteal artery** a) Boundaries and contents of fossa b) course ,Relations and branches of artery.
- *****Hip joint** a) type & articular surfaces b) ligaments c) Relations d) blood supply and nerve supply e) Applied. F) movements.
- *****Knee joint** a)type & articular surfaces b) ligaments c) Relations d) vascular supply and nerve supply e) movement at knee joint f) Applied.

- ***Gluteus Maximus**(O,I,N,A) and structures under cover of it(joints, nerves, muscles, arteries and veins)
- *****Femoral triangle** a) Boundaries and contents b) Femoral hernia.

SAQ & VSAQs:

- *****Hamstring muscles
- *****Iliotibial tract
- ***Saphenous opening
- O,I,N,A of
  - ***Sartorius
  - ***Tensor fascia Lata
  - ***Adductor magnus
  - ***Gluteus Maximus
  - *Peroneus longus
  - ***Popliteus
  - *Triceps surae

- *****Femoral sheath
- *****Adductor canal – content, boundaries, applied aspects
- ***Femoral artery

- *Lymphatic drainage of lower limb
- ***Femoral nerve
- *****Obturator nerve
- ***Profunda femoris artery
- *****Trendelenburg's sign
- ***Cruciate and trochanteric and longitudinal anastomosis and genicular anastomosis
- *****Dorsalis pedis artery
- *****Anatomical basis of soleus as peripheral heart
- ***Anastomosis around knee joint
- ***Plantar aponeurosis
- *****Add a note on
  - -collateral ligament
  - -cruciate ligament
  - -*meniscus (lateral and medial)
- ***Inversion and eversion of foot
- *Inguinal lymph nodes
- ***Guy's ropes
- *****Locking and unlocking of knee joint
- ***Inguinal ligament
- *Spring ligament
- ***Trendelenburg's test and perthe's test.
- ***Structures passing through greater sciatic foramen
- *****Tendocalcaneus
- ***Blood supply of head of femur
- ***Muscles of foot (1st layer important)
- *****Ankle joint

THORAX

LAQ:

- *****Broncho pulmonary segments
- *****Right atrium- external features, openings, interior of RT atrium and it's development
- *****Thoraco- abdominal diaphragm
- ***Heart blood supply (both venous and arterial supply) and external features of heart
- *Typical intercostal space and it's contents.

SAQ& VSAQ:

- ***Internal thoracic artery
- *****Azygous and hemizygous system of veins
- *****Thoracic duct
- *****Pleura and it's divisions
- *****Pleural recesses
- *****Hilum of lung
- ***Relations of mediastinal surface of lungs
- ***Pericardial sinuses
- *Cardiac plexus of nerves
- ***Ligamentum arteriosum & ductus entericus
- *****Arch of aorta
- *****Mediastinum (superior mediastinum is important
- *****Coronary sinus
- ***Pulmonary ligament
- *****Superior vena cava
- *****Sternal angle
- *****Peculiarities of coronary arteries
- ***Sibson's fascia
- ***Thoracic inlet Syndrome
- *****Mediastinal syndrome
- ***Atypical features of 1st rib
- ***Features of a typical rib
- ***Anatomical basis of internal thoracic artery grafts
- *Anatomical basis of pleural effusion and thoracocentesis
- ***Arrangement of structures in root of RT and Lt lungs
- *****Coarctation of aorta
- ***Extent and constrictions of oesophagus
- ***Anatomical basis of achalasia cardia
- ***Anatomical basis of ischemic heart disease

HEAD& NECK

LAQ:-

- *****SCALP** a) extent b)layers c) blood supply d) nerve supply e)Applied
- *****Parotid gland** a) location b) capsule c) externals features d)relations e) structures passing through it f) blood and nerve supply g) Applied.
- ***Muscles of mastication** a) origin b) insertion c) nerve supply d) Actions
- *****Thyroid gland** a) extend and location b)features and capsule c) parts and realtions d)blood supply and nervesupply e) Applied.
- *****Dural venous folds and venous sinuses** of duramater
- *****Extra ocular muscles** a) origin b) insertion c) nerve supply d) action.
- *****PALATINE tonsil** a) features and location b) tonsilar bed c) blood supply and nerve supply d) Applied.
- *****TONGUE** a) parts b) muscles c) blood supply and nervesupply d) development e) Applied
- *****PARANASAL AIR SINUSES** a) maxillary b) frontal c) ethmoidal d) sphenoidal e) Applied aspects.
- ***LATERAL WALL OF NASAL CAVITY** a) bones forming b) blood supply c) meatus opening d) nerve supply.
- ***POSTERIOR TRAINGLE OF NECK** under following headings a) Boundaries b) Roof and floor c) contents d) divisions e) clinical conditions
- ***Enumerate the structures in the walls of **MIDDLE EAR** cavity, mention its contents, name the communications from the middle ear.

SAQ&VSAQs:-

- ***Anatomical basis of freys syndrome
- ***Sensory innervations of face
- *****Tympanic membrane
- ***Intrinsic muscles of larynx
- *****Cartilages of larynx
- *****Lateral wall of nose

- ***Pterygopalatine fossa
- ***Muscles of pharynx
- *****Muscles of soft palate
- *****Ciliary ganglion
- *****Cavernous sinus a)location, extent& realtions b)tributaries and openings
- *****Sub occipital triangle
- *****middle meningeal artery
- ***Recurrent laryngeal nerve.
- *****Styloid apparatus
- *Submandibular salivary gland
- ***Submandibular ganglion
- *****Mandibular nerve
- *****Maxillary artery
- *****Temporomandibular joint and dislocation of jaw
- ***Relations of lateral pterygoid muscle.
- ***Parotid duct
- *****Branches of external carotid artery
- *Sternothyroid muscle
- *****Submental triangle and digastric triangle
- ***Carotid triangle and Muscular triangle
- *****Ansa cervicalis
- *****Sternocleidomastoid muscle and it's applied(wry neck)
- ***Platysma
- *Cricothyroid muscle
- *****Carotid sheath
- ***Deep cervical fascia of neck
- *****Lacrimal apparatus
- ***Nasolacrimal duct
- *****Dangerous area of face
- *Facial artery
- ***Facial vein and it's surgical importance
- *****Anatomical basis of Bells palsy
- *Buccinators
- Foramina of skull a) foramen caecum b) ***foramen magnum c) ***foramen ovale d) ***foramen rotundum e) foramen spinosum f) foramen lacerum g)*** jugular foramen h) superior orbital fissure
- ***7th cervical vertebra
- ***Vertebral artery

- ***Mandible Bone
- ***Subclavian triangle
- *****Burns space
- *Hyoglossus
- *****Digastric muscle
- *****Pterion and it's significance
- ***Nasopharynx
- ***Piriform fossa
- *****Rima glottidis
- *Waldeyer's ring
- ***Killian's dehiscence
- *****Littles area and Kiesselbach's plexus
- ***Horner's syndrome
- ***Cervical rib

TIMES' MEDICO

NEUROANATOMY

LAQ:-

- *****A) Describe the external features, parts and morphological divisions , functional divisions of **cerebellum**. B) Nuclei of grey matter. C) Blood supply D) microanatomy of cerebellum.
- *****Describe the boundaries, floor & roof of **IV ventricle.** Mention the openings in the roof.

- **Internal capsule** a) structure and formation b) vascular supply c) Applied
- ***Write in detail about the **superolateral surface of cerebrum.**
- ***__Functional areas__ of cerebral cortex.
- *****Explain the functional components , nuclei , course and relations of **Facial nerve** (VII cranial nerve). Mention its branches and distribution. Add a note on bell's palsy.
- *****__Spinal cord__- external features , meninges and modifications, blood supply and internal features.

SAQ&VSAQ:-

- *****Corpus callosum
- *****Lateral ventricle.
- *****Insula
- ***III ventricle
- ***Blood supply of brain
- ***Rhomboid fossa
- *****Circle of willis
- ***Fornix
- ***Blood brain barrier
- *Papez circuit
- ***Functions of limbic system
- *****White matter of cerebrum
- *****Medial and lateral geniculate body.
- *****Broca's area
- *****Wernicke's area
- *****Recess of IV ventricle
- ***Webers syndrome
- *****Labelled diagram of TS of mid brain at the level of inferior colliculus and superior colliculus.
- *****TS of medulla at the level of pyramidal decussation.
- ***TS of medulla at the level of sensory decussation.
- ***TS of medulla at olivary nucleus.
- *****Oculomotor nerve
- ***Trigeminal nerve
- *****Brown sequard syndrome.
- *****Tracts of spinal cord.
- cauda equina syndrome.
- ***TS of thoracic segment of spinal cord.

- ****CSF formation, circulation and functions.
- *Meninges of brain.
- *****Lumbar puncture.
- *****Hydrocephalus
- *****Spina bifida and types.
- ***Hemiplegia

Note:- Integrate neuroanatomy with CNS physiology and then read

TIMES' MEDICO

ABDOMEN AND PELVIS

LAQ:-

- ***__Rectus sheath__ a) Formation b) Origin c) insertion d) Nerve supply and blood supply e) contents d) Anatomical importance.
- ***__Inguinal canal__ a) Boundaries b) contents c) mechanisms d) and add a note on inguinal hernia.
- *****__Stomach__ a) morphology and external features b) Relations c) blood supply d) Lymphatic drainage e) Interior of stomach f) Applied aspects
- *** **Testis** a) External features b) Coverings c) structure of testis d) vascular supply e) Cryptorchidism , ectopic testis, and varicocele.
- *****__Liver__ a) location and external features b) Relations c) vascular supply d) hepatic segments e) Histology f) Clinical anatomy.
- *****__Portal vein__ a) Formation b) course c) Relations d) branches and tributaries e) porto-caval anastomosis and portal hypertension.
- ***__Pancreas__ a) External features b) Relations c) ducts d) vascular supply e) Development of pancreas
- ***__Extra hepatic biliary apparatus__ a) Gall bladder parts and ducts b) vascular supply c) nerve supply d) Applied anatomy

- ***Duodenum** a) length, location, and parts b) relations of the 2nd part of the duodenum c) openings of the duodenum d) vascular supply e) Histology
- ***Vermiform appendix** a) External features b) positions c) peritoneal relations d) vascular supply e) Nerve supply and its significance f) Applied anatomy.
- *****Rectum** a) External features and extent b) course and direction c) relations d) Mucosal folds e) vascular supply f) Applied
- *****Anal canal** a) Extent and direction b) relations c) interior of anal canal d) musculature and surgical spaces e) blood supply and nerve supply f) Applied anatomy
- ***Kidney and suprarenal glands** a) External features b) location c) Relations d) Coverings of kidney e) vascular supply f) Development of kidney and its anomalies.
- * **pelvic diaphragm** a) Formation(ligaments and muscles) b) perineal spaces c) perineal membrane d) Blood supply and nerve supply e) Applied aspects.
- *****Uterus** a) size and shape b) normal position and parts of uterus c) ligaments & supports d) vascular supply e) clinical anatomy.

SAQ & VSAQs:

- Write a short note on
  - *Umbilicus & it's importance.
  - ***Transpyloric plane
  - *O,I,N,A of Rectus Abdominis
  - ***Conjoint tendon
  - ***Mc Burneys Point
  - *Clinical Significance of Scarpas Fascia
  - *Cremasteric Reflex
  - *Fascia Transversalis
  - *****Hesselbach's triangle
  - *****Spermatic cord
  - *****Difference between direct and indirect inguinal hernia

- ***Layers of scrotum
- ***Pampiniform plexus
- *****Epiploic foramen
- *****Greater omentum
- ***Lesser omentum
- ***Morrison's pouch
- ***Rectouterine pouch
- *****Stomach bed (relations)
- *****Spleen- external features relations and applied anatomy
- ***calot's triangle
- *Common bile duct
- ***Parts relation and structure of gall bladder
- ***Referred pain of gall bladder
- ***Murphy's sign, Courvoisier's law
- *Ligament of trietz
- *****Meckel's diverticulum
- *Mesentery
- ***Superior mesenteric artery
- ***Inferior mesenteric artery
- ***Coeliac trunk
- *****Abdominal aorta and IVC (branches)
- ***Write short note on constrictions of uterus
- *****O,I,N,A of psoas major
- ***Pelvic diaphragm
- ***Urogenital triangle
- *****Perineal membrane
- *****Perineal body
- *****Ischiorectal fossa
- *****Interior (trigone) of urinary bladder
- *****Lobes of prostate
- *****Parts of fallopian tube
- *****Inguinal ligament and it's modifications
- ***Lesser sac/ omental bursa
- ***Descent of testis.
- *Marginal artery of Drummond
- *****Posterior relations of kidney
- ***Exomphalos, omphalocele
- *****Surgical importance of bare area of liver

TIMES MEDICO

GENERAL ANATOMY

- Parts of young long bone
- Bone classification
- Types of joints (*synovial joints)
- Blood supply of long bone (osteomyelitis)
- Types of ossification (Sesamoid bone)
- Types of Epiphysis
- End arteries
- Cartilage classification
- Hilton's law
- Define aneurysm, thrombosis and infract
- Types of bone fractures
- Cleavage Lines

GENETICS

SAQ&VSAQ:-

- Karyotyping
- Structural abnormalities
- Chromosomal aberrations
- Downs syndrome
- Edward syndrome

- Patau syndrome
- Turner's syndrome
- Klinefeltor syndrome
- Sex chromatin (barr body) and Lyons hypothesis
- Cri du chat syndrome

GENERAL HISTOLOGY

- All epitheliums (generally not asked during final exams)
- Loose areolar tissue
- Dense regular connective tissue
- Dense irregular connective tissue
- Adipose tissue
- Connective tissue- read theory you can expect them in MCQ's
- Hyaline cartilage
- Elastic cartilage
- Fibrocartilage
- T.s and L.S of bone
- Skeletal muscle
- Cardiac muscle
- Smooth muscle
- Muscular artery and Elastic artery
- Large vein and medium sized vein.
- Serous salivary gland
- Mucous salivary gland
- Mixed salivary gland
- Lymph node

- Spleen
- Thymus
- Thick skin
- Thin skin
- Palatine tonsil
- Sensory ganglia and autonomic ganglia
- Peripheral nerve
- Mammary gland

TIMES' MEDICO

SYSTEMIC HISTOLOGY

Paper-1:-

- Retina
- Cornea
- Parotid gland
- Submandibular gland
- Thyroid
- Pituitary gland
- Tongue
- Cerebellum
- Cerebrum
- Spinal cord
- Thymus

Paper-2 :-

- Lung
- Stomach (fundus)

- Small intestine (duodenum)
- Large intestine
- Appendix
- Pancreas
- Spleen
- Gall bladder
- Liver
- Urinary bladder (transitional epithelium)
- Testis
- Ovary
- Vas deferens
- Kidney
- Suprarenal gland

GENERAL EMBRYOLOGY

SAQ&VSAQ:

- Spermatogenesis
- Oogenesis
- Results of fertilization and site of fertilisation
- Capacitation
- Blastocyst formation
- Formation of germ layers(amnion and chorion**)
- Prochordal plate formation
- Formation of the primitive streak
- Formation of notochord
- Formation of neural tube
- Intraembryonic mesoderm
- Lateral plate mesoderm
- Folding of embryo
- Events resulting from the folding of the embryo
- Implantation, sites, types, and Abnormal site of implantation

- Decidua and its divisions
- Placenta previa and ectopic pregnancy
- Trophoblast and types
- Formation and types of chorionic villi
- Placenta it's functions and types based on different classification
- Placental membrane barrier
- Umbilical cord
- Twinning
- Pharyngeal arches development
- Derivatives of I,II,III,IV,VI pharyngeal arches
- Derivatives of pharyngeal pouches
- Somites
- Stages of endochondrial and membranous ossification.

- Note: Embryology is good scoring subject don't neglect please read thoroughly

SYSTEMIC EMBRYOLOGY

Head and neck:-

- *****Derivatives of 1st pharyngeal arch
- *****Derivatives of 2nd pharyngeal arch
- ***Derivatives of 3rd pharyngeal arch
- *Derivatives of 4th pharyngeal arch
- ***Pharyngeal pouches and their derivatives
- *****Write development of tongue – in correlation with nerve supply and developmental anomalies
- *****Development of face and associated common congenital anomalies
- *****Development of thyroid gland and its abnormalities

- *****Development of palate – add a note on cleft palate and cleft lip

Thorax:-

- *****Development of right atrium, right ventricle, left atrium and left ventricle
- *****Development of interatrial septum and it's defect in formation
- *****Development of interventricular septum and it's defect in formation
- ***Enumerate embryonic dilatations of primitive heart tube and structures derived from it
- ***Tetralogy of fallot
- ***Tracheo esophageal fistula
- ***Development of arch of aorta and it's congenital anomalies
- *Development of IVC
- *****Development of diaphragm
- *****Explain the formation of brachial cyst

Abdomen and pelvis:-

- ***Development of portal vein
- *****Development of pancreas and it's developmental defects
- ***Development of uterus
- *****Rotation of midgut
- ***Meckel's diverticulum
- *****Development of testis, its descent and its congenital anomalies
- ***Development of urinary bladder
- *****Development of kidney and its congenital anomalies

NOTE:- embryology is a good scoring topic don't leave even a single question and it will fetch you easily more than 10 marks in each paper.

AETCOM

- *****The cadaver as our first teacher- explain.
- ***Attitude and respect while handling cadavers and other biologic tissues.
- *****Explain the importance of a body donation awareness program.
- *Explain the importance of the organ donation program. And add a note on Cadaveric care.
- *Methods of disposal of Anatomical waste.
- ***Role of an Indian medical graduate in society, hospital, and college.
- *Cadaveric oath and its importance.

TIMES MEDICO
